

The Ins and Outs of Excess Flow Valves (EFVs)

EFVs ARE DEVICES THAT CAN BE INSTALLED OR REPLACED BY DELTA UTILITIES ON YOUR NATURAL GAS SERVICE LINE.

- Excess flow valves minimize or stop the flow of natural gas in your service line, which runs from the main line to your natural gas meter, when a service line becomes damaged or the device senses high pressures
- The valve automatically activates to help prevent the buildup of natural gas - reducing the chance of natural gas fires and explosions, personal injury, and property damage

It is the customer's responsibility to choose to install an EFV, at their expense, on existing lines. Cost can vary depending on the difficulty of installation. Once installed, there is no cost to customer to maintain the EFVs.

Keep in mind that only Delta Utilities can install an EFV for our customers.
